How Do I Use Zmanda with Wasabi?

Zmanda is now certified for use with Wasabi. To use this product with Wasabi, please follow the instructions below.

Pre-requisites:

- Amanda Enterprise and Zmanda clients are installed
- Wasabi account

Steps:

1. Launch Zmanda management console
   - Go to “Admin -> devices” page.
   - Click on “S3 Compatible Cloud Storage (Cloudian, Wasabi, etc.)”.

2. In the Cloud Storage page:
   - Insert device name in “Name” field.
   - Provide “Endpoint (Host Name)” - s3.wasabisys.com
   - "Access Key” and
   - “Secret Key” in respective fields.
   - After providing all the details, click “Add”.

Note that this config example discusses the use of Wasabi’s us-east-1 storage region. To use other Wasabi storage regions, please use the appropriate Wasabi service URL as described in this [article](#).
3. Once the device added, the user will see a screen like shown below.

4. Create a backup set:
   - From “Backup -> where” page, assign “Wasabi device” created to the backup set.
   - Click on “Radio button” as shown in the image below.
   - Click “Use”.
5. Provide “Location Restriction”. For this example, provide location restriction as “us-east-1”. Then click on “Add”.

www.zmanda.com
6. This will create a bucket on Wasabi cloud with the name “zmc-<access-key>-<backup set name>”.

7. Follow steps below on how to create a backup

- Go to “Backup -> now” page. Select the radio button “Force Full Backup”.
- Click on “Start Backup Now”.
- This starts the backup process.

8. Below shown is the “Monitor -> backups” page, where the user can check the status of the backup. Refer to the 2 screen shots below:
9. User can check the backups in Wasabi console.
